

USER GUIDE · PART 01

Getting Started

What Fieldscale is, how to sign in, and how to move around the app

Getting Started with Fieldscale

Fieldscale takes you from the first phone call all the way to a paid invoice — in one place. This guide explains what the app is, how to sign in, and how the pieces fit together.

What Fieldscale is

Fieldscale is an all-in-one tool for contractors. Instead of juggling a takeoff program, a spreadsheet for estimates, a notepad for leads, and a separate invoicing app, you do it all here — and each part hands off to the next automatically.

The work flows in one direction, the same way a real job does:

- 1 **Lead** — someone asks for a price. You capture them in **Leads**.
- 2 **Takeoff** — you measure quantities off the plans in **Takeoff**.
- 3 **Estimate** — those quantities become a priced estimate in **Estimating**.
- 4 **Job** — when the customer says yes, the estimate becomes a **Job** you manage.
- 5 **Invoice** — you bill the work and get paid in **Invoicing**, and watch the numbers in **Reports**.

The big idea

Because everything lives together, information you enter once follows the job through every stage. A quantity you measure in Takeoff can land in an Estimate; an accepted Estimate becomes a Job; a Job becomes an Invoice. No re-typing.

Signing in

Open your Fieldscale web address in any browser — on a computer, tablet, or phone. Enter your username and password. If your company owner created your account, they'll give you a temporary password; you can change it after you log in from your account menu.

The very first person to sign up creates the company and becomes its **owner**. Everyone else is added by the owner or an admin (see the *Owner, Team & Settings* guide).

Finding your way around

Across the top of every screen is the main menu. It follows the same left-to-right flow as a job:

Leads

Your pipeline of potential customers, plus your customer list and follow-up reminders.

Estimate

Build estimates, keep your price book, and prep field measurements and cut lists.

Job

Manage work that's been won — schedule, crews, costs, and progress.

Invoice

Create invoices, take payments, and view business reports.

Takeoff

The plan-measuring tool — open a PDF and measure quantities.

Owner

(Owners & admins only) Your team, company profile, and settings.

Only see some of these?

Fieldscale is sold "à la carte" — a company can turn on just the parts it needs. If a menu is missing, that module isn't switched on for your company. Field employees see a trimmed-down menu on purpose (just their jobs).

Things that work everywhere

Autosave

Your work saves as you go. You'll rarely need to hit a save button, though takeoffs give you one for peace of mind.

Light & dark mode

A toggle in the top-right switches between a bright and a dark screen — handy in a truck or a dim job trailer.

Your company branding

Your company name and logo show in the header and on the documents you send to customers.

Works on any device

The same app runs in a phone, tablet, or desktop browser — nothing to install.

Who can see what

Fieldscale keeps each company's data completely separate — you only ever see your own company's work. Inside your company, what a person can see depends on their role (owner, admin, member, or field employee). Roles are covered in the *Owner, Team & Settings* guide.

Trying it out?

An owner can send a **guest takeoff link** to a prospect. That guest gets a private sandbox with only the Takeoff tool — they can't see any of your real jobs or data. More on that in the Owner guide.

Where to go next

Each part of the app has its own short guide in this set. If you're brand new, start with **Takeoff** (Part 02) — it's the heart of the app — then read **Estimating** (Part 04) to turn those measurements into money.
