

USER GUIDE · PART 03

Leads & Customers

Capture leads, track your pipeline, and keep customer records

Leads & Customers

This is where you track every potential job and everyone you've worked for. **Leads** are jobs you're trying to win, **Customers** is the running history of everyone you've quoted or billed, and **Follow-ups** is your daily chase list so nothing slips through the cracks.

Leads — your sales pipeline

The Leads page is a drag-and-drop board, like sticky notes in columns. Each card is one potential job, and you slide it across the board as it moves toward a "yes."

Adding a lead

Click **+ New Lead**. It instantly creates a lead and opens its detail page so you can fill in the real information — or a lead can arrive on its own from your website form (below).

What a lead holds

Contact

Contact/company name, phone, email, project address, and first-contact date.

Opportunity

Type of work (e.g. "Kitchen remodel"), estimated dollar value, lead source (referral, website...), and a follow-up date.

Notes

A free box for budget, timeline, and anything said on the call.

Site visit

Visit date, who was there, access instructions (gate code, parking, dog on site), scope and observations, risks, photo and file uploads, and a **customer sign-off signature** they can sign right on your screen. Everything here seeds the estimate later.

Dictate

Speak the details and let Fieldscale fill the fields in, then tidy them up.

Stages and moving leads along

The board starts with three columns — **New**, **Contacted**, and **On hold**. Move a lead by dragging its card, or tap the  handle for a "Move to" menu (easier on a phone). Three more stages are handled automatically and never appear as columns: **Estimating** (a lead jumps here on its own when you start an estimate), **Won**, and **Lost** (these drop off the board but keep their history).

Custom columns

Add your own stages with **+ Add column** (e.g. "Site visit scheduled," "Waiting on customer"), then rename, recolor, reorder, or delete them. Deleting a column moves its leads to a neighbor — it doesn't delete them.

Pipeline tiles

Across the top: active leads, number of columns, total **pipeline value** (all open leads' estimated dollars added up), and how many are in Estimating.

The public "Request a Quote" form

Fieldscale gives you a shareable web form. Find it under **Company** → **Website lead form**, copy the link, and put it on your website or send it out. When a visitor fills it in (only a name is required), it becomes a new lead in the **New** column automatically, tagged with the source "**Website form.**" It's spam-protected and thanks the visitor after they submit.

Expect some thin leads

Because only a name is required, website leads can be sparse — but they always land tagged "Website form" so you know where they came from.

Customers — one hub per person

The Customers page builds itself: anyone whose name is on a lead, estimate, job, or invoice shows up here automatically. You don't create customers by hand.

The list

Each customer with activity chips (leads, estimates, jobs, invoices), total quoted, total invoiced, outstanding balance, and last activity. Includes a search box.

Duplicate detector

Flags near-identical names (typos, or one name inside another) so you can rename one to merge them.

Money tiles

On a customer's page: Quoted, Invoiced, Paid, and Outstanding.

Linked work

Their Leads, Estimates, Jobs, and Invoices — each clickable straight through. This is how a customer ties everything in the app together.

Notes & activity timeline

An automatic history in date order, plus a box to log a call, email, or note by hand.

Statement

Prints a PDF account statement of the customer's invoices with amounts, paid, and balance due — good for chasing an overdue account.

Follow-ups — your chase list

The Follow-ups page pulls three things together automatically so you know who to contact today:

Leads to follow up

Every open lead with a follow-up date. Overdue ones are flagged red.

Invoices to collect

Unpaid invoices, most overdue first, with days late and amount owed.

Recurring invoices

Invoices set to repeat, with a **Generate next** button when one's due.

A follow-up date is the only reminder

Nothing chases you unless you set a follow-up date on the lead. That date is what puts it on this page and color-codes it on the board — there are no push or email alerts.

The typical workflow

- 1 **Capture the lead** — click + New Lead, or let your website form create one.
- 2 **Qualify it** — add phone/email, type of work, estimated value, and source. Set a follow-up date. Drag it New → Contacted as you make progress.
- 3 **Do the site visit** — record scope, access, risks, photos, and the customer's signature (the  Dictate button speeds this up). It all feeds the estimate.
- 4 **Convert to an estimate** — click → **Estimate** on the lead. The lead moves to Estimating and links to its new estimate.
- 5 **Track them as a customer** — from here the person lives in Customers with every lead, estimate, job, and invoice in one place.

Tips & gotchas

- **Name the lead before converting.** The → Estimate button won't run while a lead is still called "New Lead" — the real name is what carries onto the estimate and links the records together.
- **Spelling groups customers.** "Bob Smith" and "Bob Smtih" become two separate hubs. Watch the duplicate banner and rename one to merge.

- **Deleting a lead is permanent** (the ✕ on a card), but deleting a *column* is safe — its leads move to a neighbor.
- **Fill the site visit in thoroughly.** Those notes and files pre-fill the estimate when you convert — the work you do on site saves you time at the desk.
